Agenda

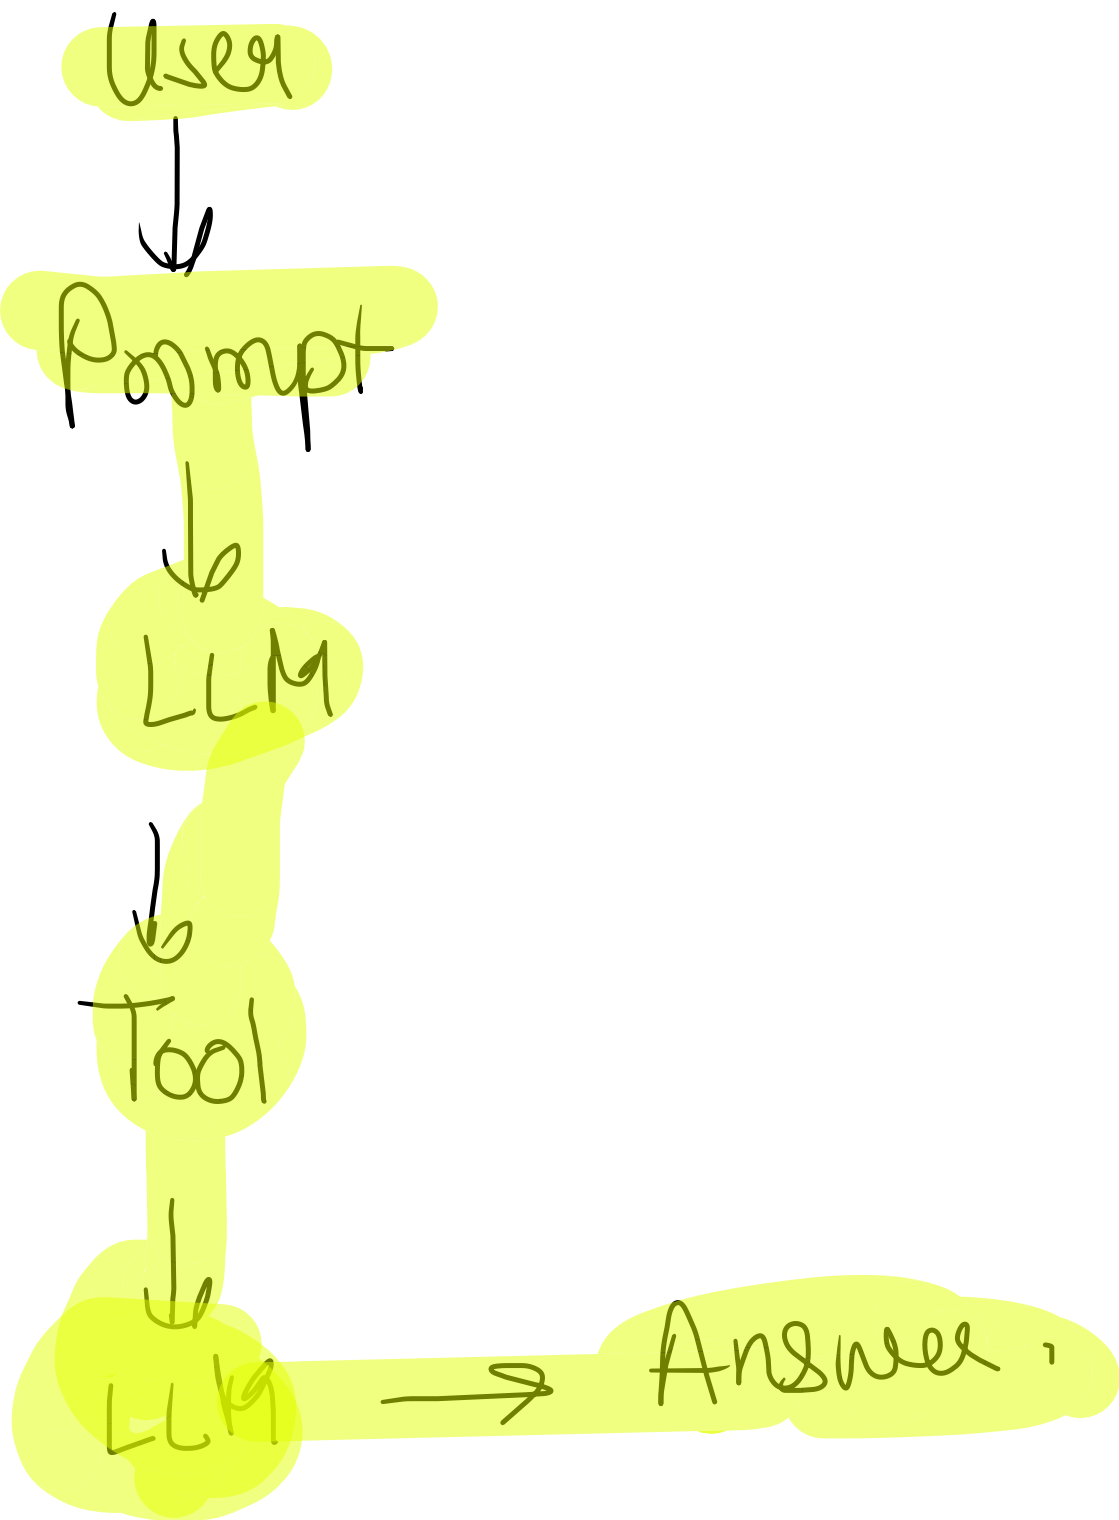

- ① Langgraph
- ② Langgraph Studio.

LANG CHAIN

Recap

→ Open Source framework.

Agentic
&
complex

workflow become
harder

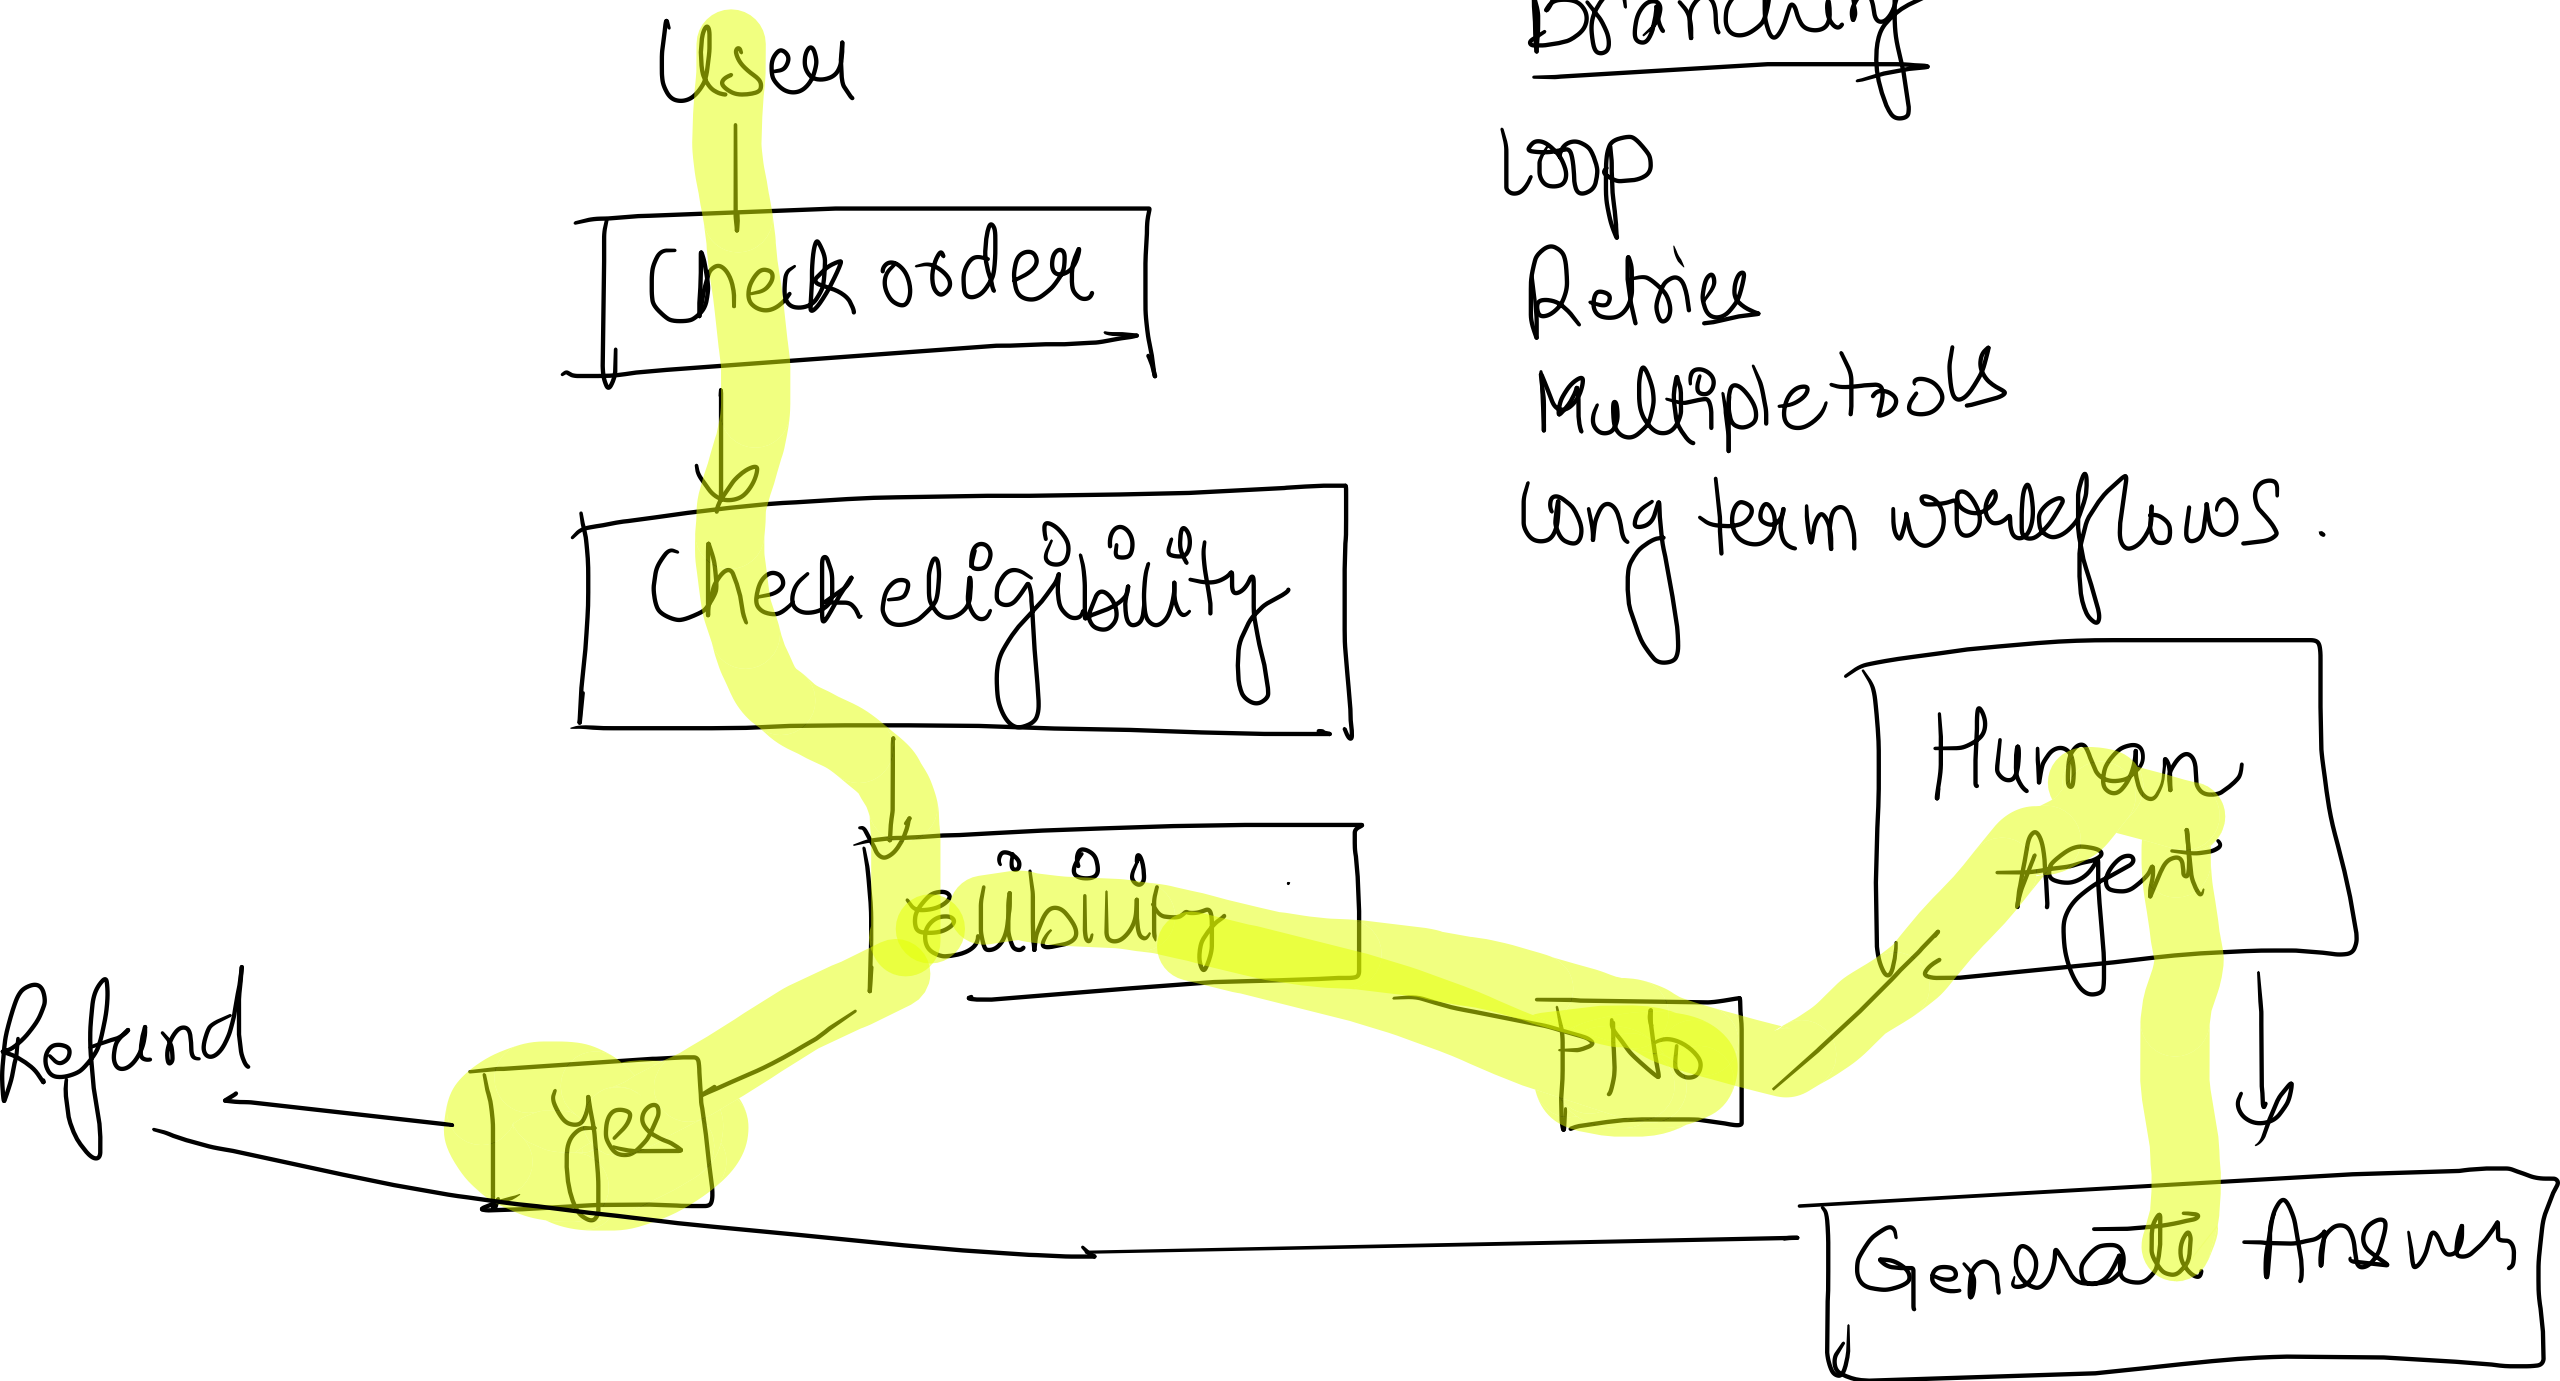

Branching

Loop

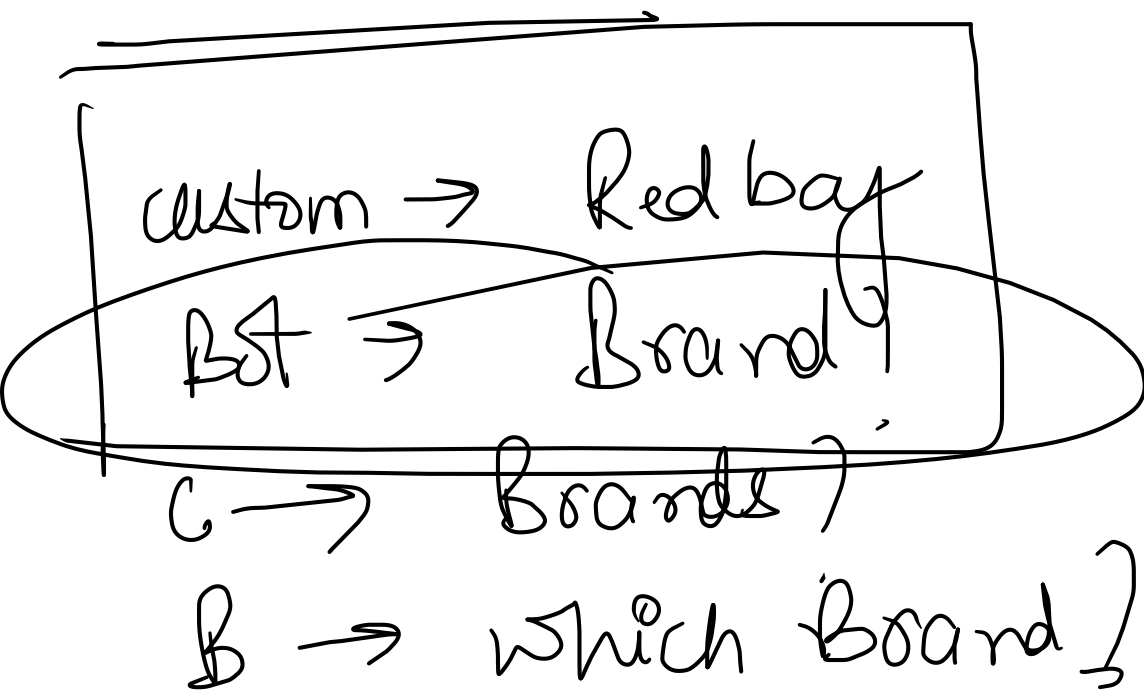

Retries

Multiple tools

Long term workflows.

without state :-

LangGraph
State management

with state

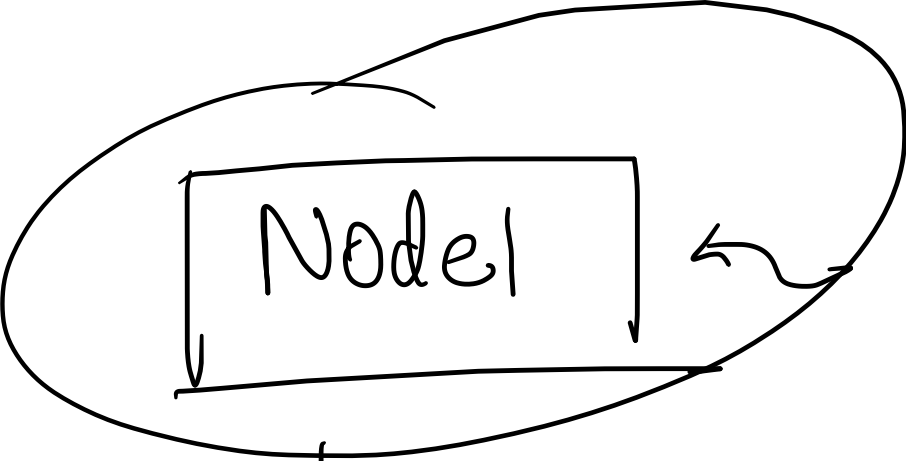

C → I want Red Bag

B → what Brands you want
C → _____

(B) →

Red color
+ Brand

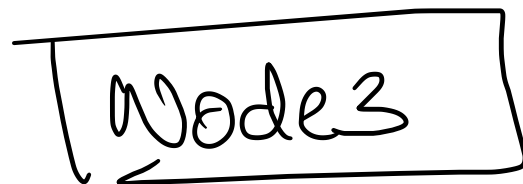

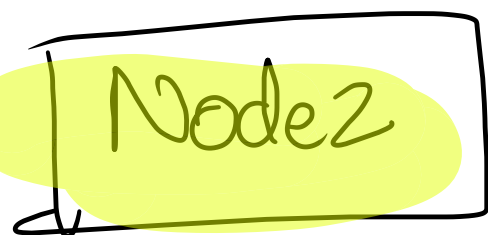

State = q

user-request = red bag
current-question = 'I want more details'

user latest question $\rightarrow$

"What all brands you have"

State ~~q~~ = q

3

① $\rightarrow \text{State} = \{ xy \}$

}

②

State $\Rightarrow \{ xy \}$
 $\{ abc \}$

}

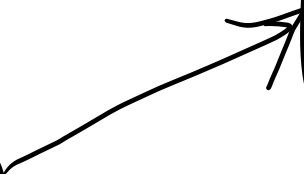

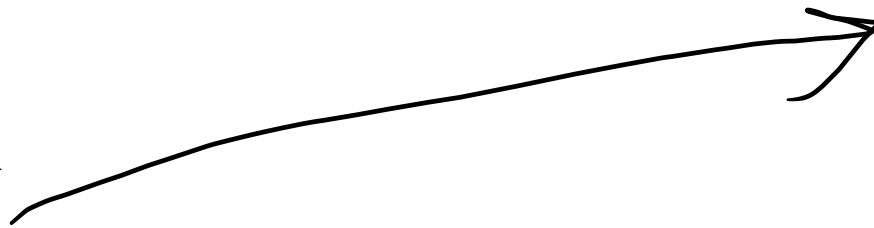

tool

$\{ xy \}$
 $\{ abc \}$
 $\{ mnq \}$

}

$\{ xy \}$
 $\{ abc \}$

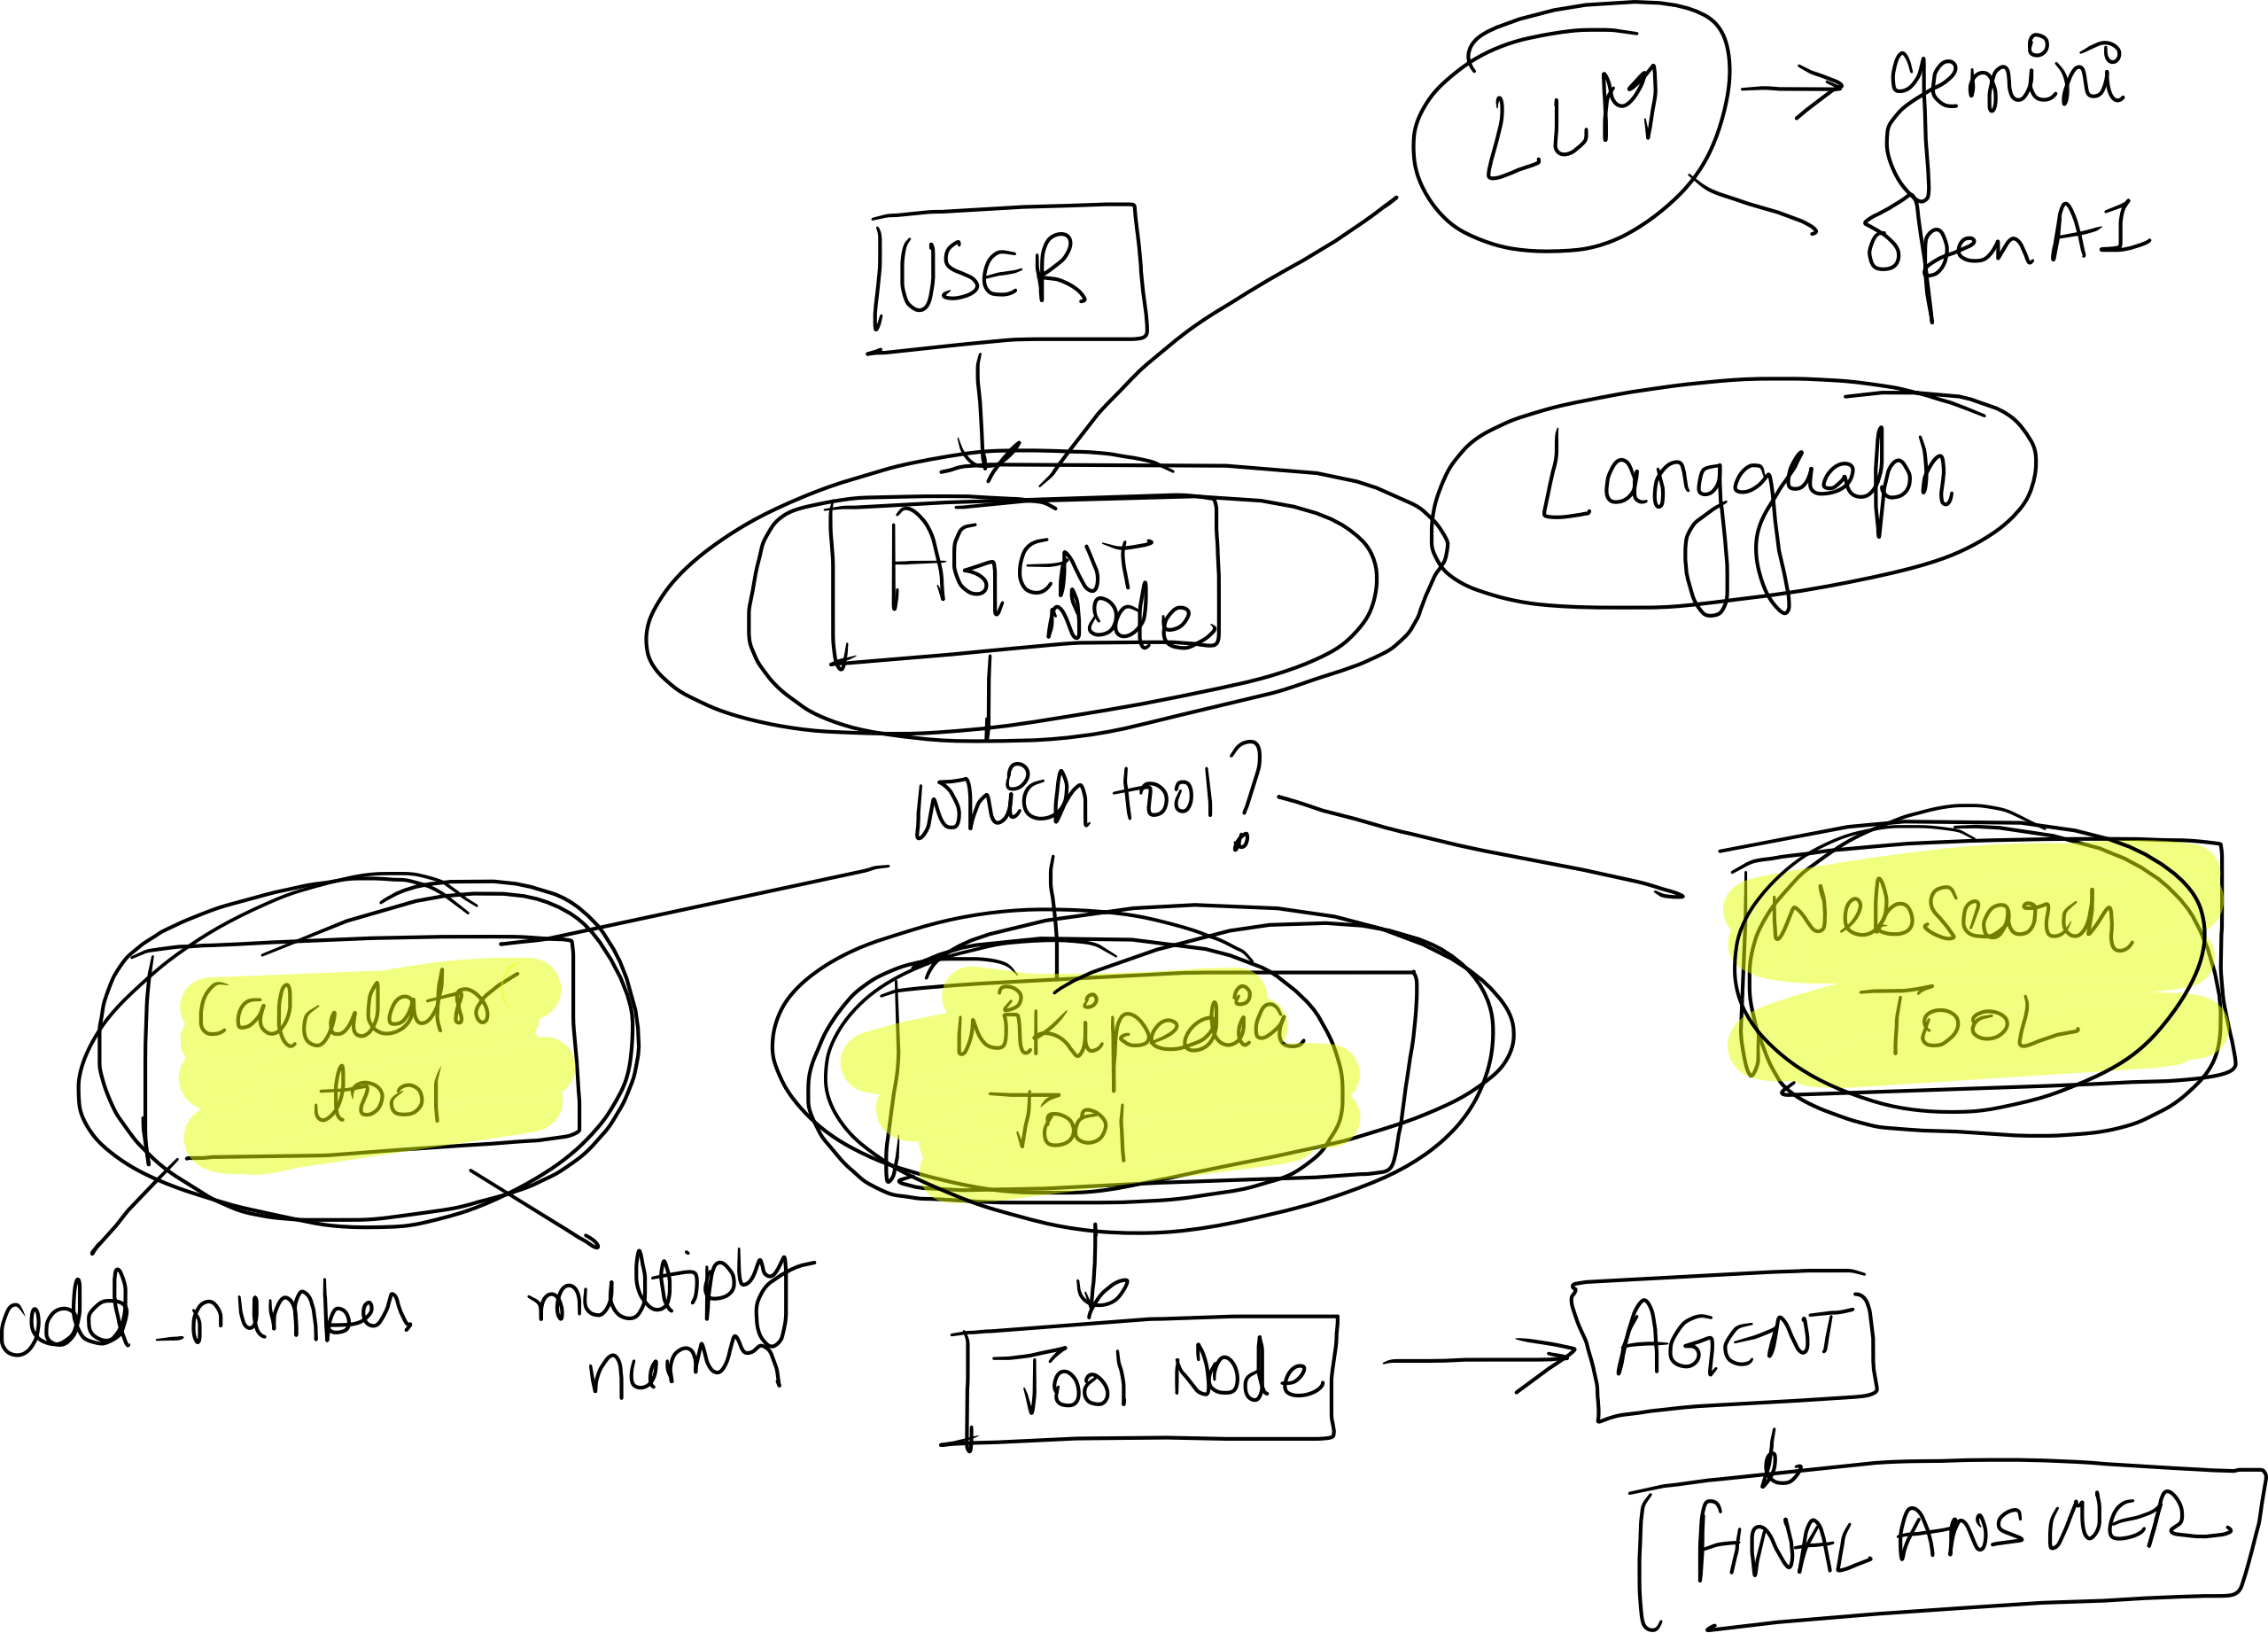

⋮

User ask: what is $25 + 1$?

STATG

 user question
]

Agent $\rightarrow$ Tool/Call $\rightarrow$ Tools $\rightarrow$ Tool Result
 $\downarrow$
 final answer. $\leftarrow$ Agent

Gemini

Tool call

add: number

Tool Node

prebuild langgraph

A Node whose
job is to
execute
the tools
LLM has
requested

multipynum wikipedia-search

web-search

Framework for

building complex AI agents

as state machines

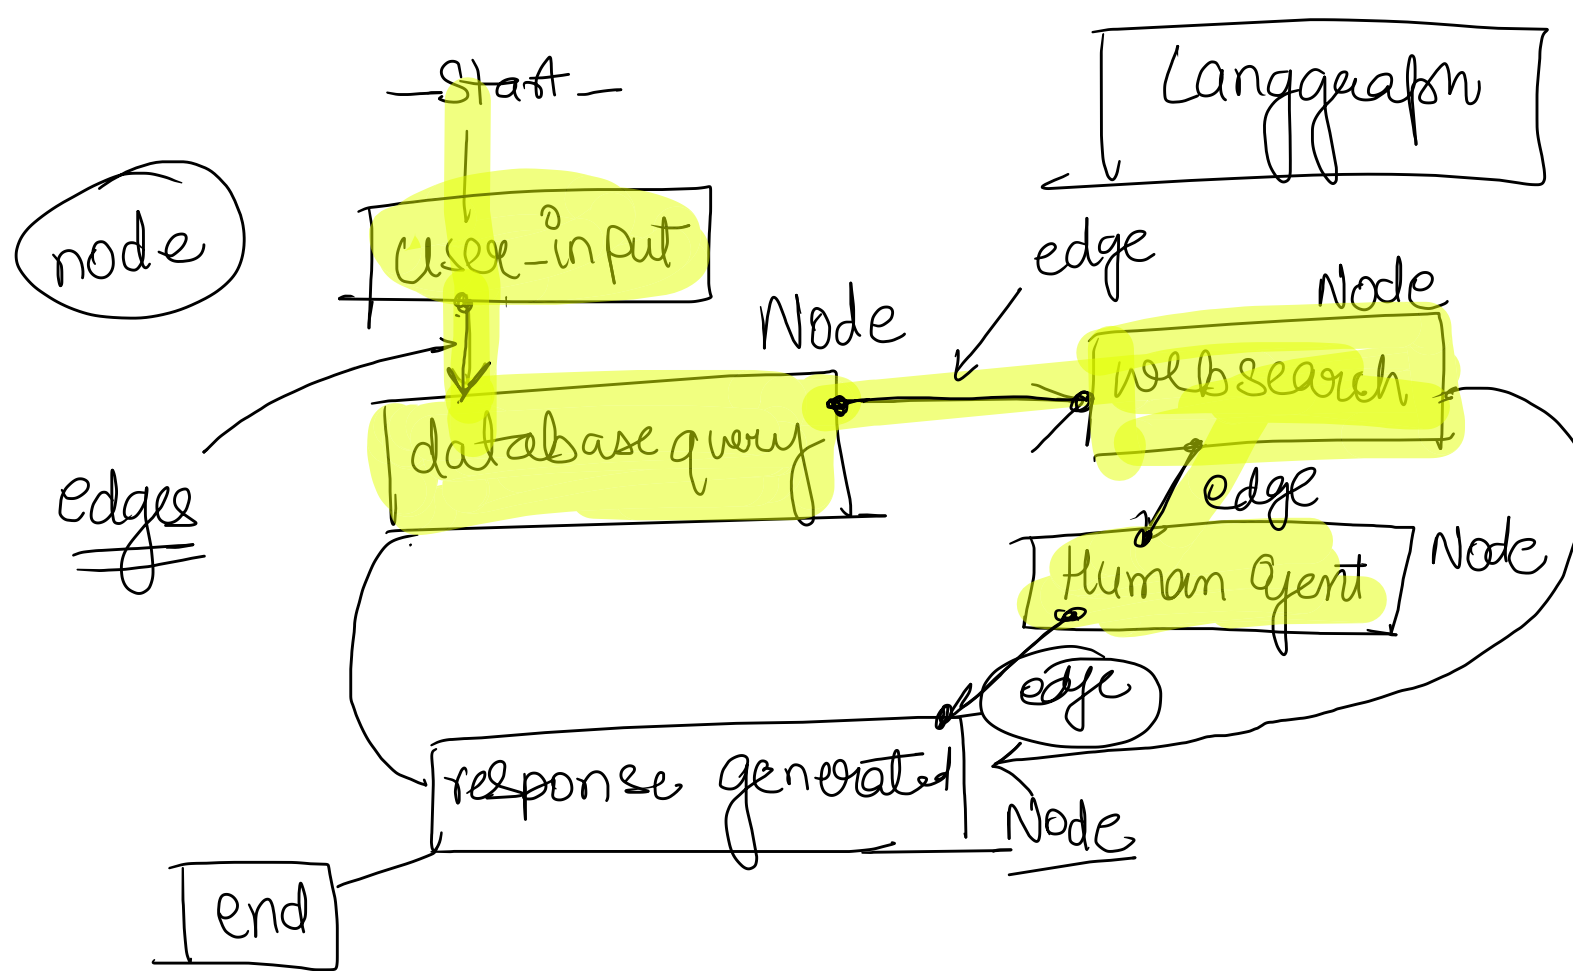

where agents move
through different steps, make decisions

Langgraph

Langchain

+

Langgraph

Node → unit of work in our workflow
 → worker

Edge → Edge defines the connection or movement between nodes.
